October 2009

Regular Testing of Fire Safety Installations

The RES Group provides a test and inspection service to ensure our customers remain fully complaint to;

*BS9999:2008 – Code of practice for fire safety in the design, management and use of buildings;
Annex V Routine inspection and maintenances of fire safety installations.*

This standard requires 'Responsible persons' who control premises to complete a number of regular tests and inspections.

For a fixed fee each week, month, quarterly or every six months, one of our qualified engineers can complete the following:

Weekly Fire Alarm Test
Extinguishing System Inspection
Smoke Control System Simulation
Fire Hydrant Inspection

Monthly Emergency Light Test
Hose Reel Inspection
Automatic Fire Door Simulation
Fire Exit Door Inspection and Operation

Quarterly Smoke Control System Simulation of ALL Zones

Six Monthly Fire Door Inspection
Dry Riser/Hydrant Inspection

The above regular tests and inspections are in addition to the six monthly and annual competent person inspections and test required, e.g. Fire Alarm and Emergency Light servicing and maintenance and annual Extinguisher servicing, Hydrant and Dry Riser testing.

NOTE: A general Fire Safety Check can be completed along with any of the above inspections as well as six monthly Fire Drills and annual Fire Safety Training.

Inspection and maintenance intervals should be determined by your premises Fire Risk Assessment and subject to regular review and an annual review by a 'Competent Person'.

For further details and prices, please contact our office on the above number.
